ABOUT

Evaluative User Research

Usability testing is a type of evaluative user research that gives insight into how easy or difficult a product is to use by testing it with real or potential users. Users are asked to complete tasks while they are being observed by a researcher to see where they encounter problems and experience confusion.

How long did we spend with each participant?

- Two researchers spent 40-120 minutes with each test participant in a conference room
- Each prototype had at least 5 test participants

What did they see?

The test participants were asked to complete simple guided tasks using low fidelity InVision prototypes.

WHAT WE TESTED

- Order type labels on Orders List
- Use of Delete or Cancel as label to remove an appointment
- Use and placement of an Info Icon on a pathway barrier
- Expand/Collapse task lists by category
- Text character limit for note
- Preference for text layout

WHO WE TALKED TO

We conducted evaluative research with 11 teammates

- 3 RNs
- 1 RN/CC
- 1 LPN
- 3 PCTs
- 1 MSW
- 1 RD
- 1 AA

LEGEND FOR SCREEN

Participants were comfortable with the task or concept and able to move forward without help

Participants had some difficulty with the task or concept, but were able to recover and able to move forward on their own

Participants had difficulty with task or concept and were unable to recover without help

Hectoral, 2.5 mcg, 3x/week >

Kaplan, M. MD

ORDERS

ORDERS LIST WITH NO LABELS

-  • 3 of 5 RNs stated they liked having all the orders in one list, not on separate lists, as long as they could filter to only one specific type if needed, for example see only the labs
 - 2 of 5 RNs said that they had no preference if there was a label or not
 - RNs easily understood the basic color coding (red, green, grey) on the orders list
-  • RNs were not familiar with the concept of Work In Progress or Note For Provider Consideration and therefore some did not grasp that they were not active orders
-  • 2 of the 4 RNs wondered “what does blue mean?” when looking at the color coding on the Work in Progress and Note for Provider Consideration

ORDERS

ORDERS LIST WITH LABELS

- 😊 • 3 of 5 RNs said they wanted labels on the orders list as it helped them scan it more easily
- RNs easily understood the basic color coding (red, green, grey) on the orders list
 - Color coding was more apparent on the list with labels
- 😐 • Some RNs did not notice the text “This is not yet an order” on the Work In Progress and Note For Provider Consideration orders

QUOTES

“I like having all the orders in one list. I wont have to flip back and forth” - RN/CC

“What does blue mean?” - RN

“The labels make it easier to scan for what I am looking for.” -RN

RECOMMENDATIONS

- Include labels on orders list as labels facilitate easy scanning of the list for order type

PATHWAYS

Task 2a 3/7 successful

Delete or cancel task action label

* Successful participants were comfortable with the task or concept and able to move forward without help

Delete or cancel action label

Cancel Appointment

DELETE OR CANCEL LABEL

- 😊 • 6 of 7 TMs thought that *Cancel* was a better label than *Delete*
- TMs stated *Delete* made them think no record of the appointment would be kept in the system
- *Cancel* made them think they could comment on why it was canceled and the data would be retained
- 😞 • 4 of 7 teammates did not scroll to find the delete/cancel action and attempted to edit the date of the appointment
- They had to be directed to scroll to the delete/cancel action label

RECOMMENDATIONS

- Label the action cancel to align with teammate mental models

Cancel

Delete Appointment

Submit

Why are you deleting this appointment?

Patient was unable to arrange transportation and needs help arranging transportation to appointment

COMMENTS BOX

- The RNs and MSW wanted to be able to document on the reason for canceling the appointment
- The TMs all selected the submit button in the upper right hand corner to move forward in the task

INFO ICON NEXT TO

- 😊 • TMs thought the info icon meant there was more information about why the goal was blocked
- TMs liked having the barrier surfaced on the list
- 😞 • TMs thought they could tap the text of the goal to see the details, many did not notice the carrot
- 😞 • TMs had difficult navigating the small space between the info icon and the carrot - many saw one, but not the other
- Some TMs thought they would get more information on the detail screen if they tapped in
- For TMs who were less computer savvy, the info icon had no meaning

CANCELLED	Remove CVC Start Date: 00/00/00	>
COMPLETED	Remove CVC Start Date: 00/00/00 Completion Date: 00/00/00	>

Barrier changes status of task and associated health goal to 'On-hold'. All associated tasks with health goal are also changed to "On-hold". After specified wait-time has passed, new task is created to "reassess barrier" for potential resolution.

Resolution of barrier changes status of associated goal and tasks back to "Ready" status.

(This verbiage is not final)

POP UP EXPECTATIONS

-  TMs were confused if the icon was tappable or not - once they determined it was tappable, they expected a pop-up for more information
-  TMs unanimously thought the info icon would give information regarding why that particular patient had a barrier, not the definition of the barrier

Patients To-Do List Appointments Me (RN)

TASK LIST

- 😊 • TMs wanted the default list to be open with all tasks
- TMs liked the default organization of the tasks with overdue, due today and then upcoming
- Due and upcoming task labels made sense with the TMs
- 😞 • 3 of the 7 TMs did need help determining how to collapse the list
- TMs commented on the inconsistent date formatting and stated it was difficult to scan as all the dates were shown differently

RECOMMENDATIONS

- Change the visual treatment of expand/collapse action to a more intuitive pattern
- The “+” icon could also be confused with the “+” Add icon being used in other locations of the application

QUOTES

“The day is ever-changing. It is good to have the tasks due today.” - RN/CC

“I want to hide what is upcoming, but I never want to get rid of what is due today” - RN

“I would want what is due now open all the time, I would not want to hide anything ” -
PCT

We conducted research with 6 teammates

- 3 RNs
- 1 RN/CC
- 1 MSW
- 1 RD

TEXT BOX LIMITS

- 7 of 7 TMs said that approximately 5,000 characters would be enough for the longest notes they write about their patients
- 7 of 7 TMs said that approximately 10,000 characters would be too long
- Some TMs said we should ask more MSWs as they often have to write very in-depth notes about patients

RECOMMENDATIONS

- Continue to share this with TMs and get feedback
- Interview more MSWs to ensure this quantity is sufficient
- Show the text in the form of a real note to make it easier to judge the quantity of text

Task 2e

TEXT ALIGNMENT

-  There is not enough data to choose between the center and left aligned versions
- 4 of 9 preferred the long form as center aligned
- 3 of 9 preferred the long form as left aligned
- TMs pointed out the labels were light and data was bold - it was not what they expected
- TMs were mixed about the stacked text in the short version
-  TMs did not like the stacked text in the long version

RECOMMENDATIONS

- If the visual design is not finalized for font treatment, consider retesting center and left aligned with label in a heavier font and data in a light-weight font

QUOTES

Center aligned

“Everything is all jumbled. ” - RN

“It is nice that it is close together, it is easy for my eyes to follow.” - RN

Left aligned

“I want to take my finger and line up the label with the data.” - RD

“I like that I can go [to the left] and see what I am looking for.” - LPN

Stacked

“This does not flow for me. It is natural to read right to left, it is easier than the top to the bottom.” - RD

“I don't like it. This seems to make it much longer.” - RN
